Marsden M-950:

Quick, easy and accurate bedridden patient weighing
for hospitals and care homes

Our M-950 Bed Scale has been designed as a convenient solution to patient weighing, where the patient can only be weighed whilst still in bed, and where moving the bed to weigh is not practical.

Why the Marsden M-950?

The Marsden M-950 Bed Scale is unlike other bed weighers.

It allows a patient to be accurately weighed whilst still in their bed, using four pads that are placed under the bed's wheels. The patient's bed doesn't even need to leave the room.

Developed after extensive consultation with customers, and testing by medical bed manufacturers, the M-950 has been awarded Class III approval - making it suitable for medical use.

It's easy to use

Many hospitals and care homes we've spoken to in the past have used similar solutions, but found them difficult to use because they're not designed for low profile beds, and because setting them up under a bed's wheels can be difficult.

We've solved both these issues. Firstly, the four M-950 pads are ultra low profile, meaning they're suitable for almost any bed - in fact, we haven't found a bed yet that won't fit these pads.

Secondly, the connectors for each pad are colour coded, meaning setting up the scale for weighing a patient in their bed is quick and easy.

Low profile design

Easy to assemble

Ideal for transportation

You'll get an accurate weight reading

The Marsden M-950 Bed Scale provides an accurate reading of the patient's weight, without the weight of the bed registered. It achieves this via the pre-set tare; once the indicator knows the weight of the beds you use, it'll remember it each and every time you use the M-950 thereafter.

Therefore you'll have an accurate weight reading of your patient, to the nearest 200g or 500g, without having to check and input the bed's weight every time.

You can weigh bed-bound patients in any room, ward or floor

Being ultra-low profile, the four pads of the Marsden M-950 Bed Scale are small in size, making this our most lightweight bed weighing solution yet.

Each of the four pads, weighing at just 5kg each, can be transported between rooms, wards or floors with the use of the carry cases, or the trolley which comes as standard. There are also carry handles on each of the four pads for extra portability.

Colour coded pads and cables

Product Specifications

Capacity: 600kg or 1000kg

Graduations: 200g or 500g

Weight of scale: 5kg per pad

Power Supply: Mains/Rechargeable Battery

Optional Extras:

Carry Cases

Trolley

Bluetooth Connectivity

Accuracy Assured
